RE: De Minimis Changes

Dear Mr. Pearson,

As required under §3.5 of the EAC's Voting System Testing and Certification Program Manual, Election Systems & Software and Wyle Laboratories have provided the necessary information in order to verify that the following changes are de minimis and do not require any additional testing:

1. ECO 1400 – New ESS Patent Label
2. ECO 1251 – New hardware configuration of the DS200 Carry Case
3. ECO 1398 – Apply plug for antenna
4. ECO 1158 – Extend suppression tray on the DS200

Based on the review of the documentation above the EAC has determined that the changes do not negatively impact the ES&S Unity 3.2.0.0 Rev. 3, Unity 3.4.0.0 or EVS 5.0 system certified by the EAC. The EAC therefore approves the proposed changes. Please update and resubmit your TDP and system identification tools to reflect the changes made to the certified system.

If you have any questions or need further information, please do not hesitate to contact me at your earliest convenience.

Sincerely,

A handwritten signature in black ink, appearing to read "Bill J. Hancock". The signature is fluid and cursive, with a long horizontal stroke at the end.

Director, Testing and Certification
